

Rachel – Authentication API Documentation

Base URL: http://127.0.0.1:5000/auth

1. User Registration

API URL

POST http://127.0.0.1:5000/auth/register

Request format

Fields the frontend should send:

```
{
  "full_name": "Test User",
  "email": "testuser@gmail.com",
  "password": "Test@123",
  "confirm_password": "Test@123",
  "role": "User"
}
```

Response format

What the frontend will receive on successful registration (201 Created):

```
{
  "message": "User registered successfully",
  "user": {
    "user_id": 3,
    "full_name": "Test User",
    "email": "testuser@gmail.com",
    "role": "User",
    "created_at": "2026-08-11T..."
  }
}
```

2. Login

API URL

POST http://127.0.0.1:5000/auth/login

Request format

Fields the frontend should send:

```
{
  "email": "testuser@gmail.com",
  "password": "Test@123"
}
```

Response format

What the frontend will receive on successful login (200 OK):

```
{
  "message": "Login successful",
  "access_token": "JWT_TOKEN",
  "user": {
    "user_id": 3,
    "full_name": "Test User",
    "email": "testuser@gmail.com",
    "role": "User"
  }
}
```

3. Forgot Password

API URL

POST `http://127.0.0.1:5000/auth/forgot-password`

Request format

Fields the frontend should send:

```
{
  "email": "testuser@gmail.com",
  "new_password": "NewTest@123",
  "confirm_password": "NewTest@123"
}
```

Response format

What the frontend will receive on successful password reset (200 OK):

```
{
  "message": "Password reset successfully"
}
```

4. Logout

API URL

POST `http://127.0.0.1:5000/auth/logout`

Request format

No JSON body. The frontend should send the access token received from Login in the Authorization header:

Authorization: Bearer <access_token>

Response format

What the frontend will receive on successful logout (200 OK):

```
{
  "message": "Logout successful"
}
```

Validation

Email should be unique. Password and Confirm Password should match. Required fields should not be empty. Proper success and error messages are returned by the APIs.
