

Leave Management – API Changes

1. Monthly Leave Limit

Employees can apply for a maximum of 6 leave days per month.

API: POST /leaves/apply

Request Body:

```
{
  "leave_type": "Sick Leave",
  "start_date": "2026-09-02",
  "end_date": "2026-09-03",
  "reason": "Personal work"
}
```

If the monthly limit is exceeded, the API returns:

```
{
  "success": false,
  "message": "Monthly leave limit exceeded. Maximum allowed is 6 days. Remaining leave days: 0."
}
```

2. Rejection Reason Required

When a Manager/Admin rejects a leave, a rejection reason is required.

API: PUT /leaves/{leave_id}/reject

Example: PUT /leaves/2/reject

Request Body:

```
{
  "rejection_reason": "Leave cannot be approved due to project requirements."
}
```

If the rejection reason is missing, the API returns:

```
{
  "success": false,
  "message": "Rejection reason is required"
}
```

Authentication

Use the existing Bearer Token authentication for these APIs.
